The first injectable device specifically indicated for the prevention and treatment of gynoid lipodystrophy (cellulite)

ALIDYA™

Anti LipoDystrophic Agents

Its formulation has been designed to:

- solubilize and remove toxic extracellular elements
- extracellular matrix alkalinization
- improve tissue oxygenation
- provide the constituents for matrix restructuring
- normalize the physiological function of the adipocytes of the subcutaneous adipose tissue

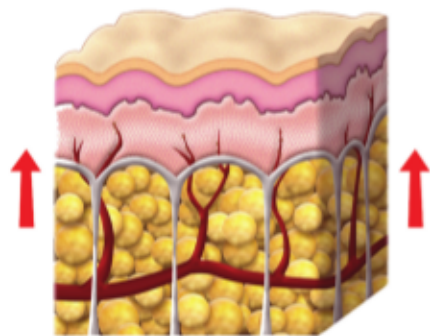

Alidya™ is the result of the most recent research on the physiopathology of so called gynoid lipodystrophy "cellulite".

Injectable device CE marked formulated by Dr. P. Motolese

Alidya™ must be injected by mesotherapy in the area afflicted by gynoid lipodystrophy (cellulite) in weekly sessions. From 7 to 12 session, depending on the degree of cellulite, are necessary to obtain visible clinical results.
